===== ATM MENU =====

1. Check Balance
2. Deposit
3. Withdraw
4. Exit

Enter your choice: 1

Your current balance is: 8000 pesos

===== ATM MENU =====

1. Check Balance
2. Deposit
3. Withdraw
4. Exit

Enter your choice: 2

Enter deposit amount: 123

Deposit successful!

New Balance: 8123 pesos

===== ATM MENU =====

2. Deposit
3. Withdraw
4. Exit

Enter your choice: 3

Enter withdrawal amount: 123

Withdrawal successful!

New Balance: 8000 pesos

===== ATM MENU =====

1. Check Balance
2. Deposit
3. Withdraw
4. Exit

Enter your choice: 3

2. Deposit

3. Withdraw

4. Exit

Enter your choice: 3

Enter withdrawal amount: 123

Withdrawal successful!

New Balance: 8000 pesos

===== ATM MENU =====

1. Check Balance
2. Deposit
3. Withdraw
4. Exit

Enter your choice: 3

Enter withdrawal amount: 3000

Exceeds maximum withdrawal limit of 2,000 pesos

===== ATM MENU =====

1. Check Balance
2. Deposit
3. Withdraw
4. Exit

Enter your choice: 3

Enter withdrawal amount: 20000

Exceeds maximum withdrawal limit of 2,000 pesos

===== ATM MENU =====

1. Check Balance
2. Deposit
3. Withdraw
4. Exit

Enter your choice: 4

Total Transaction Count: 5

OBJECT ORIENTED PROGRAMMING
SECOND YEAR SECOND SEMESTER
MIDTERM SEATWORK #2 - BASIC ATM SYSTEM

The while loop keeps the ATM running continuously, showing the menu after every transaction until the user chooses to exit (choice 4), at which point return ends the program. The switch-case reads the user's menu choice and directs the program to the correct block balance check, deposit, withdraw, or exit, then making the menu selection clean and organized. The if-else inside the withdraw case validates the amount in two steps: first it checks if the amount exceeds the 2,000 peso limit, then checks if it exceeds the current balance, ensuring only valid withdrawals are processed. A counter variable increments by 1 each time a valid transaction is completed, and its final value is displayed when the user exits.
